Allowable Subject Matter

The following is an Examiner's statement of reasons for the indication of allowable subject matter:

Applicant(s) claimed invention is directed to a method for increasing thermal convection speed in a thermofusible polymer. The ultrasonic vibrations are applied intermittently on a surface of the polymer by means of a sonotrode supplied by an ultrasound generator, either directly, or via a liquid in contact with the polymer.

The crux of the invention lies in the discovery that when the above method of simultaneous exposure of thermal radiation and ultrasonic vibrations is applied, not only is the time required for convection heating of the thermofusible polymer reduced, but also the reorganization of the polymer molecules occurs which favors orientation of the molecules in a predetermined direction. In particular a polyethylene terephthalate, enabling to increase the speed of heat transmission by thermal convection in said polymer, by exposing it simultaneously to at least a thermal radiation source and ultrasonic vibrations. Thus, the physical characteristics of the polymer can be improved and the heat transmission speed can be varied depending on its form, mass and type.

The art of record demonstrates processes related thereto, which do not, however, contain a process for increasing thermal convection speeds in general or the advantages as mentioned above.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
